

Key Measurements for Rifton Seating Products

Use this diagram to get the measurements

you need to select your Rifton seating product. Seat depth is particularly important; allow for some space behind the knee. Also consider hip width and support for back, shoulders and head. Most Rifton products have a wide range of adjustment with considerable overlap between sizes. If the client is within the range of more than one size, it is usually preferable to choose the larger size to allow for growth.
